

ABSTRACT OF THE DISCLOSURE

A vented bottle is provided. The vent is remote from the nipple. The bottle has a nipple simulating the shape, surface geometry and function of a woman's breast is provided. The nipple has a stem and a base. The base can have an areola region and a bulbous region. The areola region is positioned between the stem and the bulbous region, and can simulate the areola of a woman's breast. The bulbous region can simulate the region of a woman's breast surrounding the areola. The areola region can have a texture or surface geometry that is different from the texture or surface geometry of the stem or bulbous region.
